MERCURY COLLATERAL (ME)

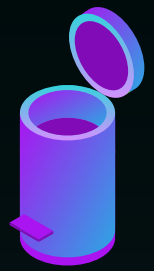
AN INTELLIGENT ALTERNATE TO MEME CULTURE ECONOMICS

PROBLEM STATEMENT
(MEME TOKENS)

1. Rug-Pull
2. Whale Dump
3. Surplus Farming
4. Loss of Purchase Power
5. No Use Case

MERCURY COLLATERAL (ME)

SAFE-HAVEN ANTIDUMP
TIME LOCK



WHALE-PROOF FARMING

BURN VAULT

MERCURY VS OTHER MEME ECONOMICS

How are we different?

	MERCURY	MEME ECONOMICS
Use-Case Driven	Yes	No
Price Volatility Control	Yes	No
Multi Wallet Loop Lock	Yes	No
Inflation Hedge	Yes	No
Anti Whale Farming	Yes	No
Time Bound Sell Lock	Yes	No
Cash Out Reserve	Yes	No
Automated LP	Yes	No

PROTOCOL BENEFITS

TIME BOUND BUY-SELL RATIO

INFLATION HEDGE

EXPONENTIAL REWARDS

AUTOMATED LP PROTECTION

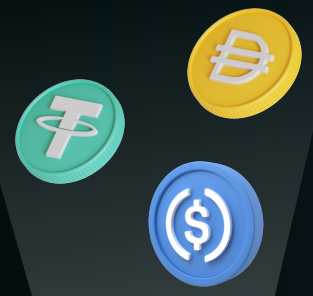
CAPITAL EFFICIENCY

DEFLATION PROTECTION

REWARDS ARCHITECTURE

INFLATION RESISTANT

(INVESTORS CAN'T STAKE MORE THAN 10% OF THEIR PORTFOLIO)



POOLS

Stablecoin deposit APY enhanced by $vME

Farm $ME + Share of the transaction fees

Liquidity Provider

Pair $ME + AVAX

$ME/$AVAX POOL

Stake $MERCURY

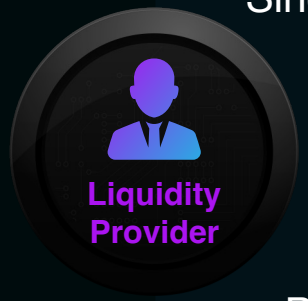
Collect and lock $vME in wallet

COMPOUNDING POOLS

CASH OUT BURN VAULT

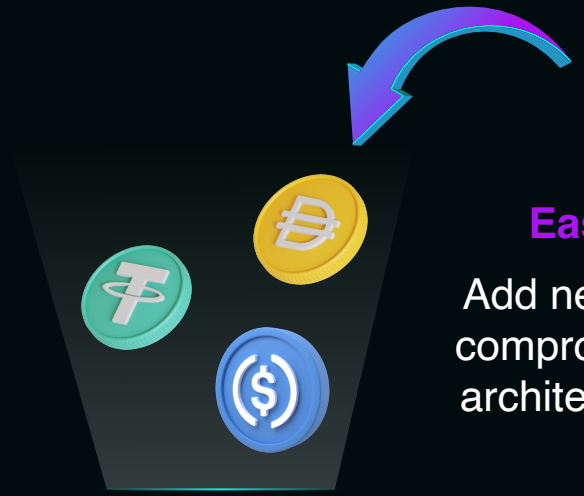
Single-sided token provisioning

Single-sided Stablecoin deposits



Proof of the exact amount of stablecoins deposited

At withdrawal time, the liquidity provider will receive back the exact same amount of tokens deposited



Flexible Liquidity Pool

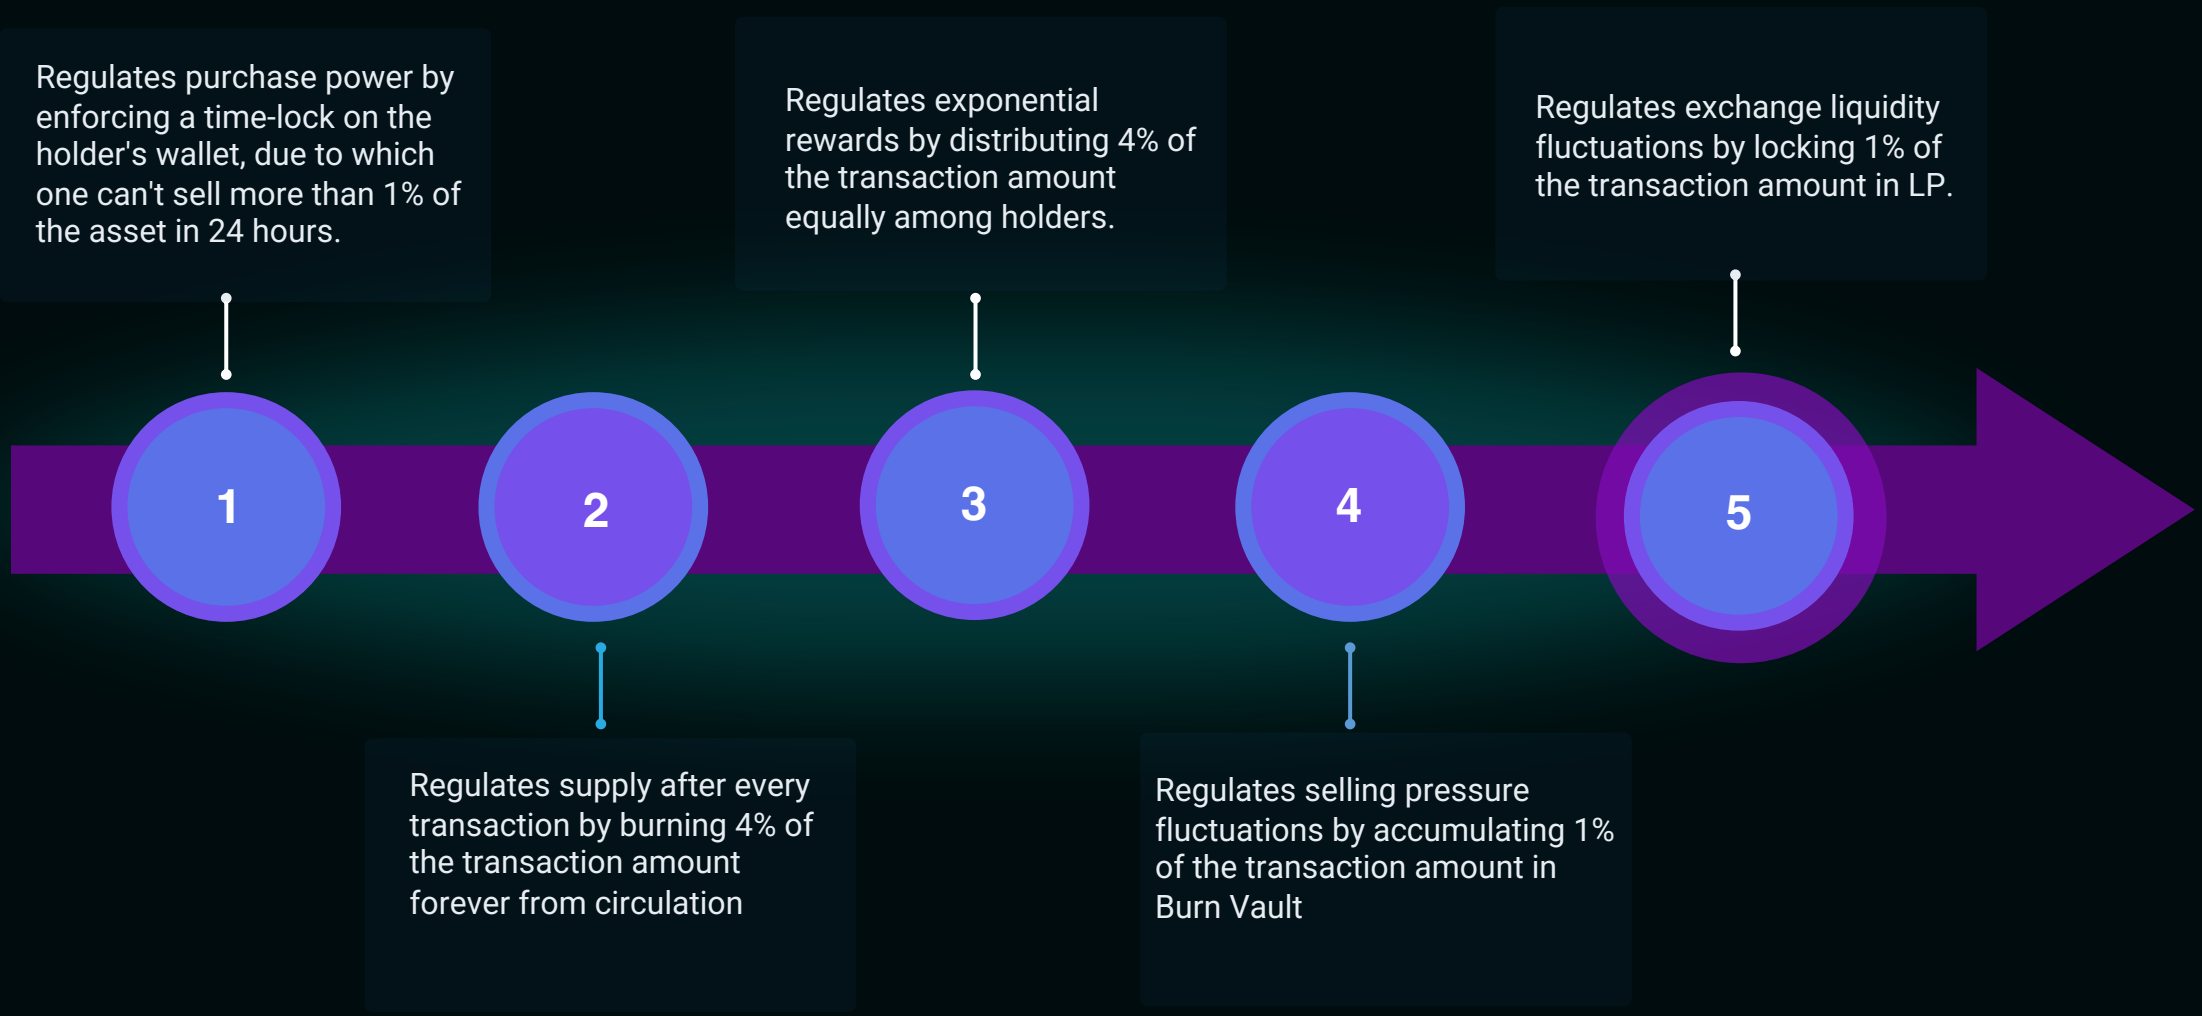
Easy scalability

Add new tokens without compromising any of the architecture advantages

CAPITAL EFFICIENCY

MERCURY PROTOCOL OPERATIONS

MERCURY achieves consistent purchase power increase after every transaction through the following FIVE dynamics



CONTRACT ARCHITECTURE

The protocol will be implemented as Smart Contracts ,including an Open Zeppelin layer to assist with corrections as required. At its core, the contract enforces several rules to maintain price balance when a transaction or sale occurs, a below.

A: If the transaction originates from the Owner's Wallet, the receiver gets 100% of the transaction amount without a fee; else,10% of the transaction amount will be deducted as tax.

B: The contract will enforce the following when a user initiates a transaction

(i) If the transfer amount is 0.75 % of the sender's balance, the address will be locked for 24 hours.
(ii)If the transfer amount is between 0.5% to 0.75% of the sender's balance, the address will be locked for 12 hours.
(iii) If the transfer amount is below 0.5 % of the sender's balance, there won't be any lock.
(iv) **A sender can make only two transactions within 24 hours**

C: The contract also enforces the following when a user receives a transaction.

(i) If a recipient receives above 0.75 % of the wallet balance, the contract will lock the wallet for 24 hours.
(ii) If a recipient receives between 0.5% to 0.75 % of the wallet balance, the contract will lock the wallet for 12 hours.
(iii) If a recipient receives less than 0.5% of the wallet balance, there won't be any lock.

USE CASE –SAFE DEFI HEDGECOLLATERAL

The protocol dynamics are structured in such a way to be a secured store of value in crypto, making it one of the robust candidates as a DeFi Collateral Asset especially for de-stablecoin and lending dynamics

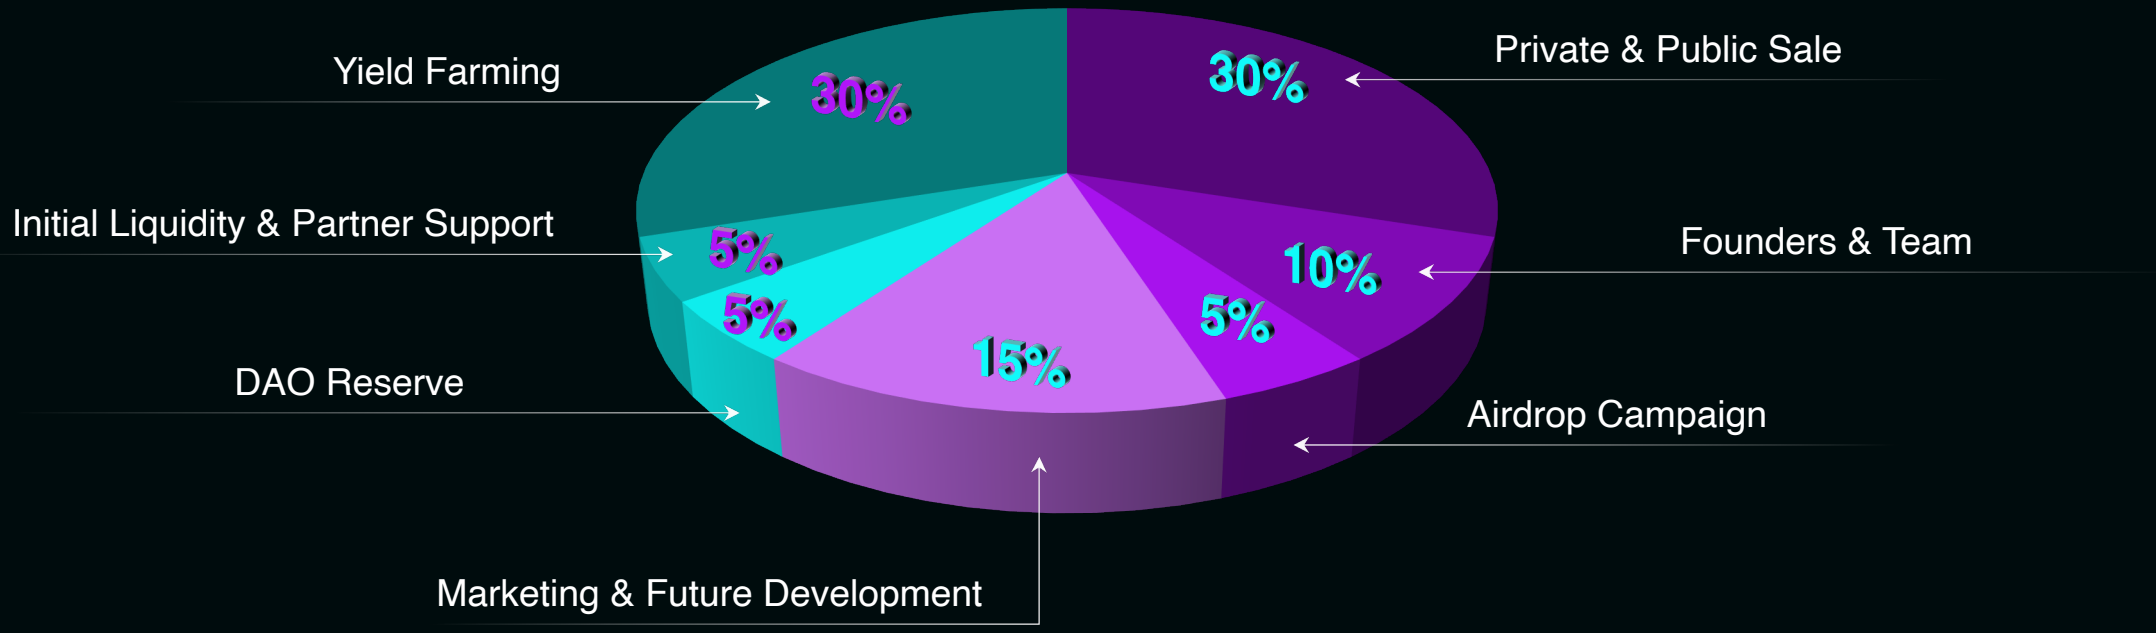
The collateral backing via Burn Vault permanently bonds the value giving a minimum price guarantee to investors, optimizing the risk factor to a bare minimum.

The Time-Lock concept further makes it Whale-Proof, avoiding price manipulation and increase the floor price consistently.

TOKENOMICS

Token Name : ME

Total Supply = 1,000,000,000,000,000



VESTING MODEL
